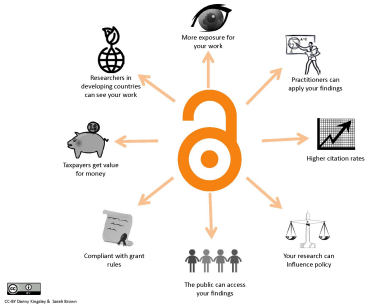
Best Practices for Biomedical Research Data Management

Module 7: Data Sharing and Reuse
Data Sharing Tools

Daina Bouquin, MLIS, Harvard University



This video will provide an introduction to using software and tools to foster open and reproducible science. Tools can foster collaboration and sharing, and allow the entire research team to work more efficiently and systematically.

My selection of tools are focused on

Open Reproducible Science

Discipline Agnostic Tools

Consider:

Culture of practice
Institutional guidelines
Funder policies

Collaboration and Sharing

- Systematic version control is essential
- Tools should be useful at many/all parts of research workflow
  - Record provenance, reproduce your workflows
- Make your work citable and archived
